PROFESSIONAL SUMMARY

Machine Learning and Computer Vision practitioner (Bachelor Informatika, Gunadarma University, 2026) currently working in embodied AI at Robometrics AI, where I collect and quality-control real-world robot training data. Backed by hands-on research comparing transfer-learning CNN architectures (VGG16, ResNet50, DenseNet121) for medical image classification, NLP chatbot development, and MLOps training (MLflow, GitHub, Docker). Strong understanding of the full ML pipeline, from data collection and preprocessing to training, evaluation, and deployment, with a data-centric mindset that treats data quality as the foundation of model performance. Seeking to grow as a Machine Learning Engineer / Computer Vision Engineer.

EDUCATION

Gunadarma University — Depok, West Java 2022 – 2026
Bachelor of Informatics | GPA: 3.56 / 4.00

EXPERIENCE

AI Data Collection Specialist & Quality Control (QC) — Robometrics AI September – Present
Embodied AI Startup

- Collect real-world data for embodied AI and robotics model training, following task protocols and collection standards.
- Perform quality control on collected episodes: verify completeness, synchronization, labeling accuracy, and task success; flag, reject, or re-collect defective data to keep the dataset consistent and training-ready.
- Report recurring data issues to the team leader and help refine collection guidelines and QC checklists to reduce errors at the source.

Intermediate Accounting Laboratory Assistant — Gunadarma University Jul 2025

- Maintained and developed the lab website (PHP) and provided IT support for lab hardware and accounting software.
- Designed lab visual and administrative materials, including assistant ID cards and event posters.

PROJECTS & RESEARCH

CNN Architecture Comparison for Lung Cancer Classification (Undergraduate Thesis) 2025 – 2026

- Compared three transfer-learning CNN architectures (VGG16, ResNet50, DenseNet121) to find the best-performing model for classifying lung cancer histopathology images into 3 classes: adenocarcinoma, benign, and squamous cell carcinoma.
- Built the full pipeline: image preprocessing, model training, and cross-architecture evaluation, producing an architecture recommendation based on comparative accuracy.
- Successfully defended the thesis in 2026.

Learning Buddy — AI Chatbot Capstone Project Oct 2025 – Dec 2025
Machine Learning Team Member, team of 5 | Asah Program led by Dicoding in association with Accenture

- Contributed to an AI chatbot embedded in a website that answers user questions, recommends learning paths, and administers assessments to classify proficiency level (beginner, intermediate, advanced).

CERTIFICATIONS & TRAINING

Machine Learning — Asah Program led by Dicoding in association with Accenture Jan 2026
Graduated with full completion | 10 modules, 900+ hours | Final project completed

- Built machine learning projects in classification, regression, and clustering on tabular data, and deep learning projects for image and text data.
- Built an end-to-end machine learning system in Python with automatic re-training based on defined metrics; completed a capstone project (Learning Buddy) in a team of 5.
- Covered programming fundamentals (Python, HTML/CSS/JavaScript), Git/GitHub collaboration, AI fundamentals, and career soft skills (communication, critical thinking, project management).

Building a Machine Learning System (MLOps) — Dicoding Indonesia Dec 2025

90-hour class | Dicoding, Google Developers Authorized Training Partner | Credential ID 07Z6J1KVJXQR (valid until Dec 2028)

- Built an MLOps pipeline with MLflow, GitHub, and Docker, covering metadata and version control, reliable model building with automatic re-training, model serving, and production monitoring and alerting.
- Verify at dicoding.com/certificates/07Z6J1KVJXQR.

Building Website using HTML5 — Gunadarma University Sep 2026

- Built a simple website with HTML5: headings, paragraphs, tables, lists, and semantic elements (audio, video, section, article), plus drawing graphics with Canvas (lines, circles, squares).

Go (Golang) for Intermediate — Gunadarma University Aug 2025

- Practiced intermediate Go: functions and methods, unit testing and Test-Driven Development, SQL database access, HTTP requests, front-end components with Polymer (data binding, layout styling), and application deployment.

SQL Server for Intermediate — Gunadarma University Feb 2025

- Practiced complex queries, indexing and query optimization, views, stored procedures, security management, backup and recovery, data transfer, and automating administration tasks in SQL Server.

SKILLS

- **Machine Learning & AI:** Computer Vision (CNN, Transfer Learning), Deep Learning, NLP (Word2Vec, LLM Fine-tuning), MLOps (MLflow, Docker, automated re-training, model serving and monitoring)
- **Data & Embodied AI:** Robotics/embodied AI data collection, dataset quality control and validation, data annotation and labeling QA, data-centric AI, collection protocol and guideline documentation
- **Programming Languages:** Python, Go, JavaScript, SQL, HTML, CSS, PHP
- **Databases:** PostgreSQL, MySQL, Oracle, SQL Server
- **Tools:** VS Code, Google Colab, Jupyter Notebook, Git/GitHub, Docker, MLflow, Figma
- **Languages:** Indonesian (Native), English (Intermediate)
